DETAILED ACTION

Response to Amendment

1. Applicant's amendment filed on 02/21/2007 is acknowledged and has been entered into the records. The applicant has amended claims 1, 5 and 8 and cancelled claims 2-4, 6-7 and 9-10 in response to the previous office action. The Examiner has accepted applicant's amendments and arguments with regard to the claims and the drawings. Claims 1, 5 and 8 are currently pending in the application.

Allowable Subject Matter

2. Claims 1, 5 and 8 are allowable.

3. Claim 1 is allowable because, prior art of record taken alone or in combination, fails to disclose or render obvious a measuring instrument for measuring an fluorescence intensity of fluorescence of each of a plurality of fluorescent coloring matters when a sample mixed with the plurality of fluorescent coloring matters having different excitation wavelengths is irradiated with light having different wavelengths, comprising: a light amount monitor that detects a light amount of light emitted by the light source unit and outputs a signal to a calculation section, which corrects for different compounds absorbing and fluorescing at different wavelengths using a correction coefficient matrix, and the correction coefficient matrix corrects the output values of the matrix elements based on the signal output from the light amount monitor, in combination with the rest of the limitations of claim 1.

4. Claim 5 is allowable for reasons similar to the reasons for allowability of claim 1 above because claim 5 comprises method-steps that is carried out on the instrument of claim 1, and has limitations similar to that of claim 1.

5. Claim 8 is allowable for reasons similar to the reasons for allowability of claim 5 above because claim 8 comprises instructions on a computer-recording medium that carries out method-steps of claim 5, and has limitations similar to that of claim 5.

Note: The closest prior art that were used in the previous office action, Modlin et al (US 6,466,316) and Hazama (US 2002/0090630 A1), does not teach a light amount monitor that detects a light amount of light emitted by the light source unit and outputs a signal to a calculation section, which corrects for different compounds absorbing and fluorescing at different wavelengths using a correction coefficient matrix, and the correction coefficient matrix corrects the output values of the matrix elements based on the signal output from the light amount monitor.

6. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
